Software Requirements Specifications

Purpose: The Online Shopping System is a web Application which is Intended to provide complete solutions for vendors as well as customers through a single gateway using the internet. It will enable vendors to setup online shops, customers to browse through the shop and purchase them online without having to visit the shop physically. The administration module will enable a system administrator to approve and reject requests for new shops and maintain various lists of shop categories.

Scope: E-commerce is a term for any type of business, or commercial transaction that involves the transfer of information across the internet. It covers a range of different types of businesses from consumer-based retail sites, through auction or music sites, to business trading goods and services between corporations. It is currently the most important aspect of the internet to emerge.

Functional Requirements:

- Minimum steps to make a purchase
